

2021 Virtual Open Lab Week

The Center for the Advancement of STEM Education

October 18 – October 22, 2021

The Center for the Advancement of STEM Education (CASE) will host a Virtual Open Lab Week again this year! The goal of engaging the community in hands-on STEM learning remains the same. Hands on activities are geared toward community members of all ages. Registration for the event is required.

Time: Open Lab Week is a virtual event. Activities will be posted on the CASE website and can be done anytime during that week.

Supplies: There are a limited number of supply kits available. Please note, a few of this year's Open Lab Week activities are the same as in previous years. As such, some of the items in your supply kit will be identical to those found in last year's supply kit. Additionally, even if you cannot get a kit, you can still participate in the many activities that can be completed using items commonly found at home.

Register: Scan the QR Code or
